

SM-TPS2-Series

Pipe Surface Temperature Passive Sensor

Features

- Sensor with passive output
- Compatible to all common HVAC DDC and Analog Controls systems, with/without Building Automation System
- Universal temperature measurement in air and water applications
- Different pocket and cable lengths for all common HVAC applications
- High performance, silicon cables
- Professional and practical product design, withstands rough environmental conditions
- Used in Commercial and Industrial Buildings

Use

The TPS2-Series is designed to measure temperature on pipe surfaces. Several mounting lengths are available to fit all common sizes. The sensor output is passive.

Advices

Security Advice	 Caution The installation and assembly of electrical equipment may only be performed by a skilled electrician. The products must not be used in any relation with equipment that supports, directly or indirectly, human health, life or with applications that can result in danger for people, animals or real value.	
Mounting Advices	 Caution Mounted with a tightening strap to the pipe. Use contact fluid for better heat transfer between sensor and measuring medium. To avoid permeation of condensate, mount sensor on top of the tube, if possible.	
Installation Notes	 Caution The product must be installed at a suitable place and within the range of validity of the local electrical installation laws and regulations. Due to the self-heating, the wire current should not exceed 1mA.	
Commissioning Notes	 Caution Sensing devices with transducers should in principle be operated in the middle of the measuring range. The ambient temperature of the transducer electronics should be kept constant.
